

Small Business Water Efficiency

Marrickville Council is committed to supporting local businesses to be environmentally sustainable by reducing their use of drinking quality water.

Council is offering FREE water saving devices to help you save precious water and save money.

Available are:

- Flow restrictors that can be retro-fitted onto basin taps cutting water consumption by up to 50%!
- Tools to make your old single-flush toilet more water efficient!

Under a similar water efficiency project, participating businesses reduced water use by 10% to 40% on average.

targetsustainability@marrickville business officers will come to your premises and undertake a brief water audit of fixtures in your business. They will then give you the simple water saving devices free of charge on the spot.

The officers will be able also to provide advice about other water saving devices for which subsidies will be available to businesses that commit to further sustainability initiatives.

This project is open to all businesses and organisations in the Marrickville Local Government Area. But you will need to hurry, because the subsidies will stop as soon as all the project funds are spent.

Take the first steps to reducing your water bill:

- telephone 9335 2061 and speak with the [targetsustainability](mailto:targetsustainability@marrickville) team
- or send an email to envof@marrickville.nsw.gov.au
